**1962**

**WHAT DO PECAN GROWING AND GRAVITY HAVE IN COMMON?**

The common denominator is DENSITY and PROPER SPACING . . . and result to pecan grower or oil producer is GREATER YIELD.

GRAVITY DENSITY, properly located, will: show more possible oil and gas structures; show trend alignment; show salt ridge connections between salt domes; show predominant fault alignment in upper sedimentary deposits.

E.S.I. GRAVITY surveys give quality density . . . averaging up to 5 stations, or more, per square mile, providing complete control. E.S.I. pioneered in county-wide gravity surveys. An entire county can be purchased for a fraction of the cost of contract work.
